**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 11 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 3,812,402 to Garth.

Regarding claim 1, Garth teaches a semiconductor package (Figs. 1 – 3) comprising:

- a semiconductor die (10) having an IC;
- a substrate (11) having a die side coupled to the IC; and
- a plurality of multi-signal bus bars (15, 16) electrically coupled to a socket side (22) of the substrate, the bus bars to enable I/O signals to be transported between the substrate and a socket.

The substrate taught by Garth would have inherently included a plurality of die-side contact pads situated under each die, since the die contact pad is needed for functionality. Garth further teaches a plurality of I/O connectors (22), which could be referred to as socket-side contact pads. The substrate would have inherently included a plurality of traces to enable communication between the die (die-pads) and the socket side contact pads.

Regarding claim 11, Garth teaches a semiconductor package, wherein the bus bars have a substantially planar overall geometry.

Regarding claim 13, Garth teaches a semiconductor package, wherein the IC is a computer processor.

***Allowable Subject Matter***

3. Claims 14 – 25 are allowed.
4. Claims 2 – 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
